Mobile Phone Shell Bending Test Machine DZ-217I-Supplier

Product Introduction

Mobile Phone Shell Bending Test Machine is mainly used for mobile phone protective sleeve for bending test, During the test, the sample is fixed on the fixture, and repeated bending is carried out under the specified bending Angle and number to judge the bending strength.

Technical Specifications

Model	DZ-217I
Test Station	1
Test Angle	10-150 degrees (touch screen digital setting)
testing Speed	10-120 times/min (touch screen digital setting)
Test Fixture	A set of left fixed fixture and right moving fixture
counter	0~999999 times (touch screen number can be preset, reach the number of automatic stop)
Overall dimensions (L * W * H)	490mm×460mm×500mm
Net Weight	25Kg
Power Supply	AC220V,10A

Features

- 1.The fuselage adopts electrostatic paint treatment, which is more beautiful and generous.
- 2.The machine adopts touch screen display control, the operation is more convenient and intuitive, the number of tests and angle can be set arbitrarily, and the operation is convenient.
- 3.Chinese and English interface can be selected, easy to operate, easy to understand.
